SCOPE OF THE DOCUMENT

Creating a resume using HTML and CSS can be a great way to showcase my skills and qualifications in a visually appealing format. With HTML and CSS, you have full control over the design and layout of your resume. CSS is used for styling, allowing you to define fonts, colours, layout, and responsiveness.

Ultimately, the goal is to create a visually appealing, well-organized, and easily readable document that highlights your skills and experience to potential employers or recruiters.

FOLDER STRUCTURE

Mubeena-Resume
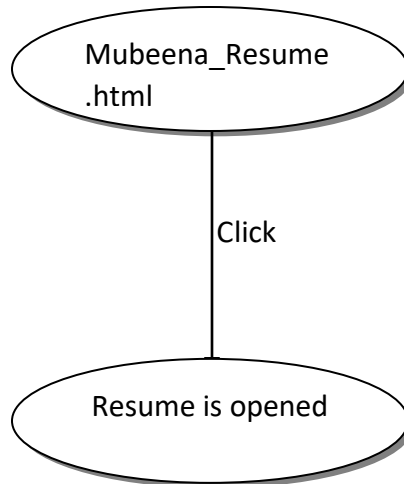

- ➢ Code html& css
    - Mubeena_Resume.html

- ➢ Images
    - M_photo.jpg

- ➢ Screenshots
    Screenshots of the website are present in this folder.

- ➢ Resume_Doc

CONTROL FLOW STRUCTURE

```

```

TECHNOLOGIES

Technologies used for creating this web page are:

       1) HTML

       2) CSS

HTML

HISTORY OF HTML:

HTML stands for Hyper Text Markup Language.

- ❖ It is used to share the information over the internet.
- ❖ HTML id developed by Tim Berner's Lee in 1991.But officially in 1993.
- ❖ The First version of HTML consists of "18 tags"

❖ HTML follows certain rules and regulations setup by "ISO".

(International Organization for standardization). These set of rules and regulation are present in 'SGML document'.

Versions of HTML:

1. HTML-1 version in the year 1993.
2. Html-2 version in the year 1995.
3. HTML-3.02 version in the year 1997.
4. HTML-4.1 version in the year 1999.
5. HTML-5 version in the year 2014

Features of HTML:

- ➢ It is easy to Learn.
- ➢ It is a tag based language.
- ➢ HTML is supported by multiple browsers.
- ➢ First web browser is Netscape navigation which was developed by the "Mosiac".
- ➢ It is a portable language.
- ➢ WORA (write once run anywhere).

Limitation of HTML:

- ➢ HTML has less designing capabilities.
- ➢ It is dependent on other technology such as CSS in order to develop well designed Web pages.
- ➢ HTML has no programming capabilities.
- ➢ Using HTML and CSS we can develop only static Web page.
- ➢ In order to write the HTML code required an editor such as VS Code, Notepad, Eclipse.
- ➢ In order to execute the HTML code we required Web browsers. Like Chrome, Firefox, edge, Opera Safari .

CSS

- ➢ CSS stands for Cascading Style Sheets.
- ➢ It was developed by W3C to add styling's to the HTML elements.
- ➢ W3C stands for World Wide Web.com

Versions of CSS:

1. CSS-1 (level-1) in the year 1996.
2. CSS-2 (level-2) in the year 1998.
3. CSS-3 (level-3) in the year 1999.

Why do we required CSS ?

- ➢ Since HTML has less designing capabilities we cannot create well designed or most appealing Websites.
- ➢ Using HTML we cannot add style, animation and transitions to the Webpage.
- ➢ Therefore we require CSS to create well designed Webpages.

Advantages of CSS:

- ➢ It allows to add styles, animation and various effects to the Webpage.
- ➢ It allows us to develop the Webpage rapidly. It is also know as RAD (rapid application Developer).
- ➢ It allows us to separate from formatting develop page to the presentation of Webpage.
- ➢ It allows to create well designed Websites.

Limitations of CSS:

- ➢ Using CSS we can perform static styles for the Webpages.
- ➢ In order to create dynamic styling for the Websites. We must make use of scripting language such as JavaScript and Libraries of JavaScript.

Types of CSS:

1. Inline CSS
2. Internal CSS

3. External CSS
4. Default Browser CSS

1. Inline CSS:

Defining all the CSS properties within the style attribute inside the opening of the tag is referred to as Inline CSS.

2. Internal CSS:

Defining all the CSS properties within <style> inside the HTML document is referred to as Internal CSS.

3. External CSS:

Defining all the CSS properties within as external Script or File with an extension CSS is referred to as External CSS.

- ➢ In order to link external CSS file within the HTML document we must use of <link>.
- ➢ The value for the 'ref' attribute should be 'stylesheet'.

        <div style="width: 90%;height: 310px;margin-left: 20px;margin-top:
10px;text-align: justify;font-family: sans-serif;">

          <p style="font-family: sans-serif;text-align: justify;"><b>1.MP3 Player
using ARDUINO:</b></p>
```

```html
            <p style="font-family: sans-serif;text-align: justify;line-height:
25px;">      The goal of this project is to
demonstrate the use of this module with

            Arduino, using the push buttons to instruct the Arduino to send serial

            commands to the module and control mp3. We will use three buttons
to

            achieve this. The first button will serve as the "previous" button that
will

            enable us to play the previous song. The second button will be to
"play/pause"

            the file currently being played and the third button will be used to play
the

            next file.</p>

        <p style="font-family: sans-serif;text-align: justify;"><b>2.Real Time Face
Detection using MATLAB:</b></p>

        <p style="font-family: sans-serif;text-align: justify;line-height:
25px;">      This project is to determine
whether there are any faces in the image and detection of face. While this
appears to be a trivial task for human beings, it is very challenging task for
computers.Although

            there have been hundreds of reports approaches for face detection,

            if one were asked to name a single face detection algorithm that has

            most impact in recent decades, it will most likely be the Viola and

            Jones face detection, which is capable of processing images

            extremely rapidly and achieve high detection rates.</p>

    </div>

    <div style="width: 22%;height: 30px;border: 2px solid black;margin-left:

CONCLUSION

In conclusion, using HTML and CSS to create your resume gives you the freedom to design a visually appealing and interactive document that can help you stand out in today's competitive job market. Just remember to strike a balance between creativity and professionalism, ensuring that your resume effectively communicates my qualifications and experiences to potential employers.
